# ABOUT KIDS IN TECH

Kids in Tech (KiT) is a Massachusetts-based nonprofit organization that excites, educates, and empowers young people through hands-on STEM learning and career exploration. Through partnerships with schools, communities, and industry, KiT helps young people and the broader community build the skills, confidence, and sense of possibility to imagine themselves as creators, innovators, and future leaders in science and technology. The organization is developing a new innovation space at 5 Necco Street that will provide young people with opportunities to explore, experiment, create, and connect with the possibilities of STEM. The temporary window art installation will serve as an early public expression of that vision, illustrating a journey from imagination and exploration to collaboration, creation, and the possibilities young people can build together.

# PROJECT DESCRIPTION

This window mural is being designed for Kids in Tech at 5 Necco Street, an upcoming STEAM-focused community space set to open in 2027. The space will serve as a collaborative “think lab,” bringing together people from different communities and backgrounds to learn, share, create, and develop new ideas through Science, Technology, Engineering, Arts, and Mathematics (STEAM).

The purpose of the window mural is to create a sense of excitement, curiosity, and anticipation around what is coming to 5 Necco Street in 2027. The design will introduce the community to the spirit of Kids in Tech while transforming the windows into a visually engaging preview of the creativity and innovation that will take place inside.

The mural will be produced using interior-applied vinyl. Approximately 30% of the total window surface will contain printed graphic elements, while the remaining 70% will utilize transparent/see-through vinyl, allowing natural light and visibility through the windows to remain largely unobstructed.

The project is anticipated to take three days for printing and production and three days for installation, with a total project cost of \$5,000.

# DESIGN

# WINDOW 1

BEFORE

# WINDOW 1

## THE SPARK

Every great idea begins with a question, a thought, or a moment of imagination. A young girl captures her ideas in a notebook as pages begin to take flight around her. The movement represents curiosity breaking beyond the page, the beginning of a journey where imagination has the potential to become something bigger.

# WINDOW 2

BEFORE

An idea grows when it is shared.  
The thoughts from the first window begin to take physical form, connecting with one another and sparking conversation. This moment represents collaboration, the exchange of perspectives, questions, and possibilities that can turn an individual idea into something greater.

BEFORE

# WINDOW 3

## COMMUNITY IN ACTION

Ideas become powerful when people come together to build on them.

What began as a single thought has now become part of a larger conversation and shared mission. Different ideas, perspectives, and people come together, creating a community where imagination can turn into collaboration and then turn into action.

# WINDOW 4

## LAUNCHING POSSIBILITIES

The ideas are ready to move beyond the space where they began.

A rocket carries these ideas outward, symbolizing exploration, discovery, and the possibilities that emerge when curiosity is supported by action. The journey comes full circle: a question leads to exploration, exploration leads to collaboration, and collaboration leads to action.

The future begins with an idea—and the courage to explore where it can go.

# MATERIALS & INSTALLATION

- Interior-applied printed vinyl
- Approximately 30% of window surface contains printed graphics
- Approximately 70% of remaining design is transparent/see-through
- Vinyl applied to the interior surface of the windows
- No permanent alteration to the glass
- Installation will be completed over 3 days
- Vinyl can be removed without permanently altering the windows
