

2017 BOSTON BICYCLE COUNTS

Measuring how many people ride bikes in the City.

CITY OF BOSTON | TRANSPORTATION DEPARTMENT

Mayor Martin J. Walsh

Commissioner Gina N. Fiandaca

OVERVIEW

2017 marked the second year of our automated bike count program. At 62 locations, we counted an average of nearly 40,000 bike trips per day. This number does not capture all bike trips in the City. The counted locations provide a representative sample of people biking.

The information provided in the following pages is a summary of the 2017 data. This is our second year of this count program, so we cannot yet identify trends. Many factors, including weather, contribute to changes. In the future, we'll be able to develop a trend line using multiple years of data. More data related to biking in Boston, including our 2016 bike count data, can be found at boston.gov/bike-data.

WE COUNTED THE MOST BICYCLISTS AT:

Note that the numbers represent averages for 24-hour periods.

1. Massachusetts Avenue Bridge north of Dr. Paul Dudley White Bike Path - 4,321
2. BU Bridge north of Commonwealth Avenue - 2,485
3. Southwest Corridor Bicycle Path south of Heath Street - 2,185
4. North Harvard Street south of Soldiers Field Road - 1,707
5. Columbus Avenue west of Massachusetts Avenue - 1,689
6. Longwood Avenue east of Pilgrim Road - 1,646
7. Longfellow Bridge Eastbound west of Charles Street - 1,226
8. Brighton Avenue east of St. Lukes Road - 1,225
9. Massachusetts Avenue south of Columbus Avenue - 1,080
10. Columbus Avenue west of Holyoke Street - 1,056

AT THESE LOCATIONS, BIKES WERE MORE THAN 10% OF VEHICLES DURING PEAK HOURS:

The percentages below represent the bikes as a percentage of the total number of vehicles counted from 8 - 10 am and 5 - 7 pm. Sites are listed alphabetically.

- A Street north of Iron Street - 10.9%
- BU Bridge north of Commonwealth Avenue - 12.2%
- Columbus Avenue west of Arlington Street - 15.3%
- Columbus Avenue west of Holyoke Street - 16.1%
- Columbus Avenue west of Massachusetts Avenue - 20.9%
- Commonwealth Avenue Eastbound west of Silber Way - 14.6%
- Commonwealth Avenue west of Arlington Street - 10.2%
- Commonwealth Ave. Westbound west of Silber Way - 11.3%
- Franklin Street north of Alcott Street - 43.0%

- Longfellow Bridge Eastbound west of Charles Street - 20.2%
- Longwood Avenue east of Pilgrim Road - 23.1%
- Mass. Ave. Bridge north of Dr. Paul Dudley White Path - 18.5%
- North Harvard Street south of Soldiers Field Road - 15.5%
- Washington Street south of Hayward Place - 19.5%
- Western Avenue east of Hague Street - 11.4%

Honorable mentions:

- Brighton Avenue east of St. Lukes Road - 9.6%
- Harvard Avenue north of Commonwealth Avenue - 9.2%

HOW WILL BOSTON'S BIKE COUNT DATA BE USED?

We'll be able to develop factors to understand how many people are biking on certain types of routes in certain contexts. ("If X people bike on this street today, we can expect Y people to bike on a similar street today.") We can begin to normalize other counts taken at other times of the year. ("If X people ride here on a colder morning in November, we can expect Y people to ride here on a warmer evening in June.")

Better data helps us do better in planning and designing our bike network.

We may also be able to project how many people would ride on new routes or different facilities as those projects are being planned and designed. ("If we add a separated bike lane here, we can expect Z more people to bike on this route.")

Better data helps us in looking back and assessing our progress in promoting bicycling in Boston. We can better answer questions such as:

- Has ridership changed on key routes?
- Have we encouraged more people to ride by building a more connected network?
- Has the presence of new bike share stations influenced bike-riding on nearby streets?

With the annual automated counts program, we are improving the quality of our data by:

- Collecting information about trips that happen outside of peak commuting hours
- Diversifying the types of locations that are counted
- Standardizing the dates and hours of counts, year-over-year
- Ensuring counts are done, regardless of weather

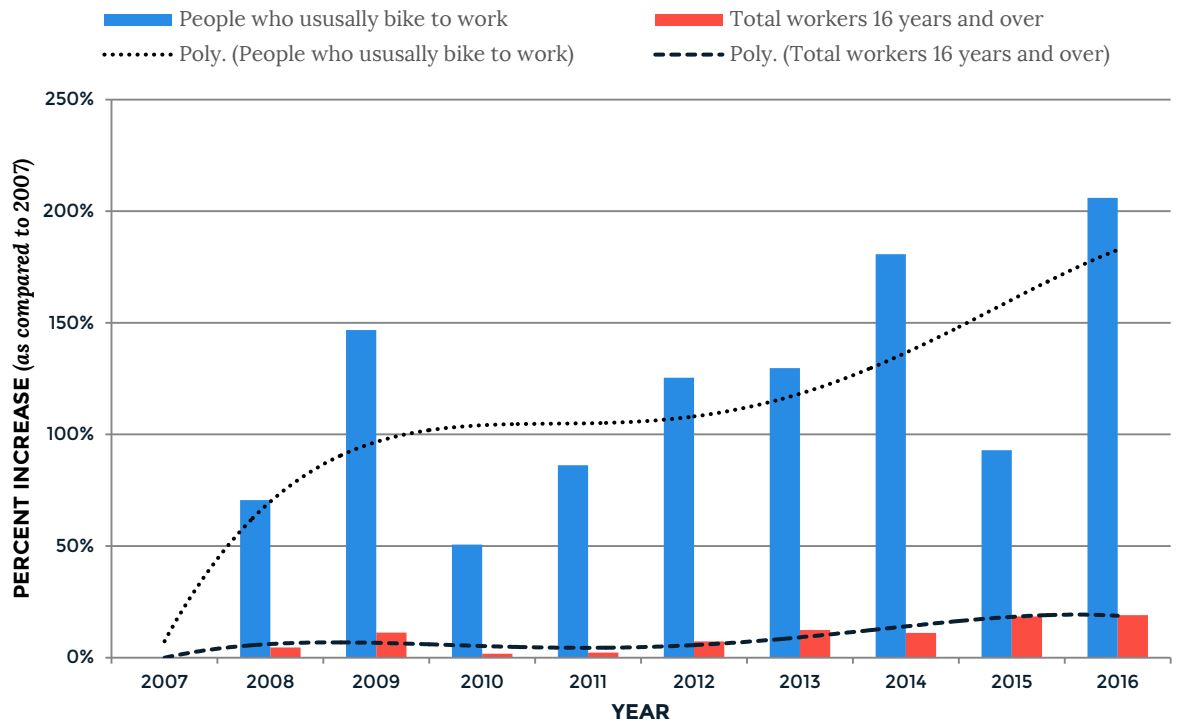

AMERICAN COMMUNITY SURVEY COMMUTING DATA

Bicycle counts are one of a few data sources that help us understand biking patterns in Boston. While count data help us measure trips at specific times and locations, the American Community Survey data help us understand citywide trends for commuting.

Each year, the U.S. Census Bureau mails the American Community Survey (ACS) to a representative sample of households. Responses collected from this survey allow us to understand population, housing, work force, and other demographic information more regularly than the decennial census, which is sent to all households. The ACS asks respondents how they usually got to work over the last week. We use the data from this question to understand trends in commuting patterns over time.

While the number of Bostonians commuting by any mode increased by 20% between 2007 and 2016, the number of people who “usually” bike to work increased 180% in the same time frame. This shows us that not only are more people biking in Boston, we’ve made some progress in shifting people towards biking.

PERCENT INCREASE OVER TIME¹

¹Data compiled from the American Community Survey, table S0801, 1-year estimates

AMERICAN COMMUNITY SURVEY DATA LIMITATIONS

The American Community Survey data set is the most consistent and reliable data available to us. However, it isn't going to tell us how many people bike in Boston, where people bike in Boston, or what needs to be done to encourage more people to ride. Its limitations include:

- ▶ **WORK TRIPS ARE THE ONLY TRIPS THAT ARE COUNTED** – ACS data do not capture any non-commute trips. If you commute by T, walk to/from lunch, and ride bike share to/from meetings, your public transit trips are the only ones that are counted.
- ▶ **MULTI-MODAL COMMUTES ARE NOT MEASURED** – Respondents who use more than one mode of transportation for their commute are asked to choose whichever mode they used for the longest distance.
- ▶ **THE SURVEY IS SENT YEAR-ROUND, BUT ONLY ASKS ABOUT TRIPS IN THE LAST WEEK** – If you are a person who rides their bike to work every day in the warmer months, and you respond to the survey during the winter, you won't be counted as a person who commutes by bike.
- ▶ **DATA ONLY REPRESENT PEOPLE WHO LIVE IN BOSTON** – The data set for Boston does not account for anyone who commutes to a job in Boston, but lives outside of the city.

2017 BIKE COUNT DATA

HOW DATA WAS COLLECTED

In the fall of 2017, we conducted automated traffic counts at 62 locations across Boston. Each location was counted for 48 hours on either Tuesday, September 26, 2017, and Wednesday, September 27, 2017, or Wednesday, October 4, 2017, and Thursday, October 5, 2017.

These counts were conducted by taking video of each location for the specified period of time, then running the video through software that classified each vehicle as a bicycle or motor vehicle. Staff visited several locations to conduct hand counts, which were then used to verify the accuracy of the automated counts. Some videos were also reviewed to further verify accuracy of the counts.

We chose video technology because it would allow us to take counts regardless of the street sweeping schedule. The downside to this approach is that videos do not accurately capture the speeds of drivers as they pass the count location. Sidewalk riding is also not captured in these counts, including, for example, the westbound bike path on Seaver St.

2017 COUNT LOCATIONS

Generally, the 2017 count sites match the September 2016 count locations. Changes are listed below. Last year, we selected locations by looking at the type of street, the type of bike accommodation (if any), and the nearby land uses. The Boston Bikes Advisory Group provided feedback and guidance on the locations.

The changes to the count locations include:

- Washington Street north of Kenwood Street – new location
- Massachusetts Ave Bridge – Last year, the count was conducted south of the ramp to the Dr. Paul Dudley White Bike Path. This year, the count was conducted north of the ramp. This slight change in location significantly changes the data. We will work to ensure that the count is conducted south of the path next year.
- Commonwealth Avenue west of Silber Way – Due to the width of Commonwealth Avenue, two cameras have to be set up, one on each side of the street. This year, the counts were done at different times. Given the day-to-day changes seen in the number of people traveling on streets, we chose to include this location as two individual counts.

2017 MAPS AND SUMMARY TABLE

The following maps and summary table provide snapshots of the data. The data shown represents averages of all available dates. Averages were calculated using the formulas listed below.

Peak hours are defined as 8 am – 10 am and 5 pm – 7 pm, the hours when we measured the most people biking.

AVERAGES - PER DAY

$$\text{Number of bikes} = \frac{\text{Total number of bikes counted on all days}}{2}$$

$$\text{Number of motor vehicles} = \frac{\text{Total number of motor vehicles counted on all days}}{2}$$

$$\text{Bikes as \% of total} = \frac{\text{Total number of bikes counted on all days}}{\text{Total number of all vehicles counted on all days}}$$

AVERAGES - AM PEAK

$$\text{Number of bikes} = \frac{\text{Sum of bikes counted each day from 8 am - 10 am}}{2}$$

$$\text{Number of motor vehicles} = \frac{\text{Sum of motor vehicles counted each day from 8 am - 10 am}}{2}$$

$$\text{Bikes as \% of total} = \frac{\text{Sum of bikes counted each day from 8 am - 10 am}}{\text{Sum of all vehicles counted each day from 8 am - 10 am}}$$

AVERAGES - PM PEAK

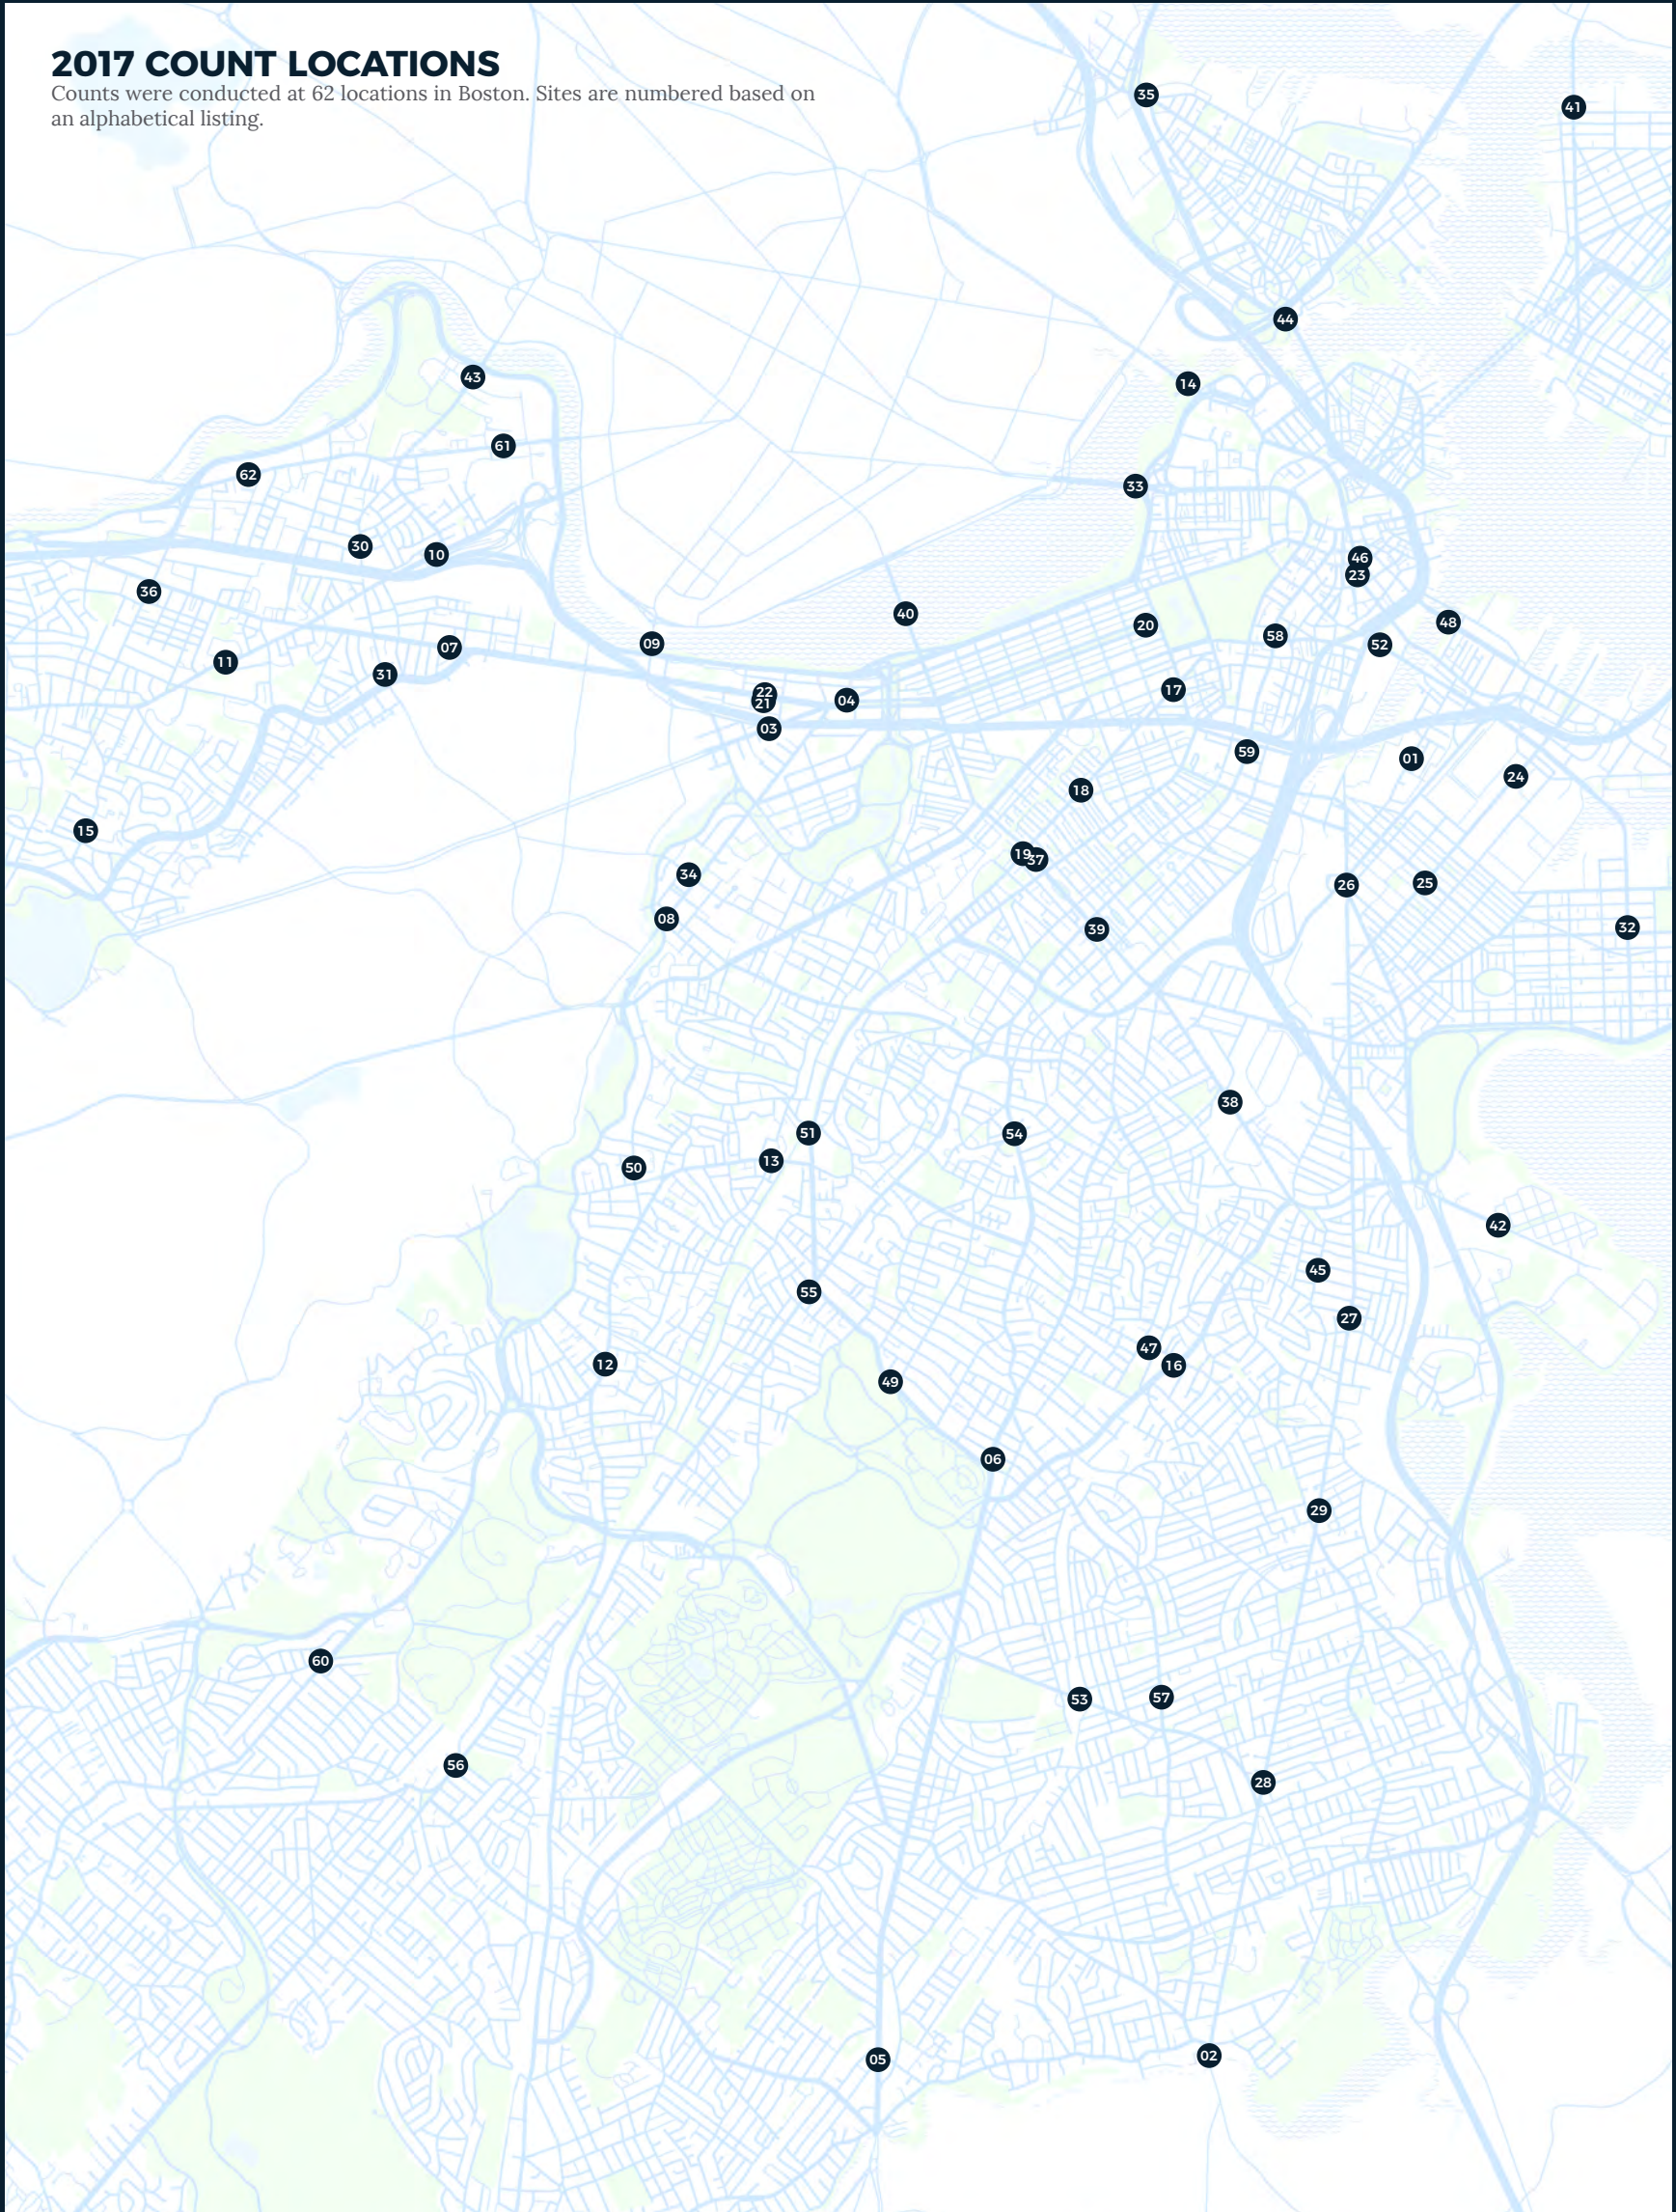

$$\text{Number of bikes} = \frac{\text{Sum of bikes counted each day from 5 pm - 7 pm}}{2}$$

$$\text{Number of motor vehicles} = \frac{\text{Sum of motor vehicles counted each day from 5 pm - 7 pm}}{2}$$

$$\text{Bikes as \% of total} = \frac{\text{Sum of bikes counted each day from 5 pm - 7 pm}}{\text{Sum of all vehicles counted each day from 5 pm - 7 pm}}$$

2017 COUNT LOCATIONS

Counts were conducted at 62 locations in Boston. Sites are numbered based on an alphabetical listing.

¹One-way count

2017 LOCATION DATA

Count data from each location is provided on subsequent pages. While most locations are two-way streets, some are one-way; the charts reflect this. Each page provides data for one 24-hour period and includes:

- ▶ Site number, as listed on the "2017 Count Locations" map
- ▶ The name of the location
- ▶ The date
- ▶ The weather
- ▶ Charts showing the total number of bicycles by hour of day and bicycles as a percentage of the total number of vehicles counted during each hour. There is one chart for the total, and one or two charts showing data based on direction (Northbound/Southbound or Eastbound/Westbound)
- ▶ A table with the number of bicycles, the number of motor vehicles, and bicycles as a percentage of the total number of vehicles broken out by hour of the day. This chart also breaks the data out by Northbound/Southbound or Eastbound/Westbound. Individual AM and PM peaks are highlighted in the rows that indicate the number of bicycles.
