

# Climate Ready City

“ Find a way to change our pollution levels and be able to recycle and find ways to reuse all of the objects we put to waste

— Roxbury resident ”

IMAGINE  
BOSTON 2030

# Imagine if Boston's neighborhoods were carbon free and prepared for climate change.

**We would need to...** (Check all that appeal to you)

- Change the way we live and work to use less energy, produce less waste, and spend less time driving
- Improve the energy system so that more energy is locally produced and renewable
- Build streets, parks, and landscapes with more plants, trees, and other structures to absorb stormwater and make the city cooler
- Build / update buildings to use less energy and produce the carbon-free energy they use
- Have buildings that are prepared for the ways the climate might change in 80 years
- Build dikes, dams, and other barriers to protect the Boston Harbor during storm surge flooding, e.g. Hurricane Sandy
- Strengthen community organizations so neighborhoods can bounce back

**How would you make this idea better?**
